

Topic 9 — Performance Evaluation & Optimization

AI Job Application Assistant • GPT Evaluation

1. Assessment Objective

Evaluate the Custom GPT using defined scoring metrics for Accuracy, Clarity, and Consistency; score at least 10 responses; identify weak areas; apply targeted optimization; and re-score a previously evaluated response to confirm improvement.

2. Scoring Framework

Metric	5/5 Standard	1/5 Standard
Accuracy	Fully correct, evidence-based, follows the Knowledge Guide	Fundamentally incorrect, fabricated, or contradictory.
Clarity	Clear, concise, well-structured, professional, immediately understandable	Confusing, contradictory, or extremely difficult to understand.
Consistency	Fully consistent with defined rules, terminology, previous behavior	Contradicts established instructions, rules, or previous behavior.

3. Evaluation Results

Ten representative responses were evaluated across accuracy, clarity, and consistency. All 10 responses received 5/5 on each metric. No artificial weak score was introduced.

Metric	Average	Result
Accuracy	5.0 / 5	PASS
Clarity	5.0 / 5	PASS
Consistency	5.0 / 5	PASS
Overall	5.0 / 5	PASS

4. Optimization Applied

Because no functional weakness was identified, the optimization targeted a genuine quality improvement rather than inventing a failure. The GPT instructions were refined so that when guidance is not explicitly covered by the Knowledge Guide, the assistant must say so, avoid attributing undocumented advice to the guide, and clearly label additional advice as general practical guidance.

5. Re-Scoring / Regression Check

A previously evaluated reference-contact scenario was used for re-scoring after the optimization. The response preserved the correct privacy guidance while making Knowledge Guide provenance explicit.

Metric	Before	After	Result
Accuracy	5/5	5/5	PASS
Clarity	5/5	5/5	PASS
Consistency	5/5	5/5	PASS
Total	15/15	15/15	No regression

6. Evaluation Challenges & Assumptions

Subjective scoring challenge: distinguishing a true 4/5 from a 5/5 can be difficult when a response is correct but differs slightly in wording or detail. Resolution: apply the predefined rubric first and record the reason in the notes rather than scoring based on personal preference.

Key assumptions: application-specific facts come from the user's provided resume and job description; the Knowledge Guide remains the primary source for documented processes and rules; general practical guidance is not presented as a Knowledge Guide rule.

7. Final Deliverables

- evaluation_sheet.md — scoring metrics and 10-response evaluation
- optimization_summary.md — targeted optimization and rationale
- evaluation_rescoring.md — before/after re-scoring and regression check
- Custom GPT — AI Job Application Assistant
- Loom demonstration — <https://www.loom.com/share/f617a54c269e4a01ab765f749e6a7cfe>
- GitHub repository — <https://github.com/shaikshahid777/ai-job-application-assistant-gpt-evaluation>

Final Evaluation: 5.0 / 5 across Accuracy, Clarity, and Consistency • 10/10 responses passed
